

# HEALTH AND SAFETY PREVENTION SOLUTIONS

To assure safe and healthful environment, SGT encourages safety protocols to prevent the spread of COVID-19. Our Coronavirus safety solutions include: thermal cameras, temperature checks, hand washing, PPE monitoring, and more.

## THERMOGRAPHIC SYSTEMS

When used correctly, thermal imaging systems generally have been shown to accurately measure someone's surface skin temperature without being physically close to the person being evaluated.

## HAND WASHING STATIONS

Handwashing is an easy, inexpensive, and effective way to prevent the spread of germs and keep employees healthy as recommended by the CDC. SGT can upgrade (no touch) or install additional stations to provide ample opportunities for hand washing.

## SANITIZATION SYSTEMS

Hand hygiene is a critically important prevention measure in all office settings. Alcohol-based hand sanitizer (ABHS) effectively kills most germs carried on the hands of healthcare workers and is recommended for use by the CDC.

## KIOSK CHECK-IN SYSTEMS

Social distancing guidelines are requiring businesses to implement self-service technology. These systems will measure customer, visitor, or employees for at-risk temperatures at the point of entry. Contactless systems will reduce the need for Person to person interaction and reduce the chances of virus transmission at the workplace.

## SECURITY CAMERA & INFRASTRUCTURE

SGT offers total security camera solutions tailored to your needs. We offer Indoor, Outdoor, and night vision options for maximum flexibility. Our solutions can include design, installation, and provisioning capabilities for a complete package.

## PERSONNEL PROTECTIVE EQUIPMENT SOLUTIONS

CDC recommends the use of PPE to limit the spread of viruses. OSHA requires all employers to provide appropriate PPE to all employees wherever needed. SGT can work with your team to create, implement, observe, and verify your PPE management plan.

## SECURITY PERSONNEL

Professional courteous security teams are your company's first impression to the public. SGT can provide trained personnel with necessary COVID prevention and response equipment.

## POWER OVER ETHERNET

Our installation teams can design and implement Power over Ethernet solutions, for faster and lower cost deployment. POE provides more flexibility in camera location, and new LED lighting options to meet sustainability goals.

## TECHNICAL SUPPORT

SGT can provide technical support on provided prevention systems. We also provide audit, integration, and support, on existing platforms.

# SALIENT GLOBAL TECHNOLOGIES

We possess full and flexibility integration and implementation capabilities. Our systems engineers are experienced in the delivery of solutions of differing scope and scale. We are proven at supplying point solutions as well as complex solutions all the way to major data-center implementations.
